

Sending card S4

Specification

Beijing Kystar Technology Co., Ltd.

Product description

Kystar S4 sending card is an important part of the LED main control system. It is used to receive data from computers and other equipment, and convert it into network signals for transmission to the receiving card. The S4 sending card adopts the industry's top design technology and meets international and industry standards.

With an independent power supply, the front panel indicator shows the operating status, which is more convenient and safer to use.

Features

- One DVI input, four network port outputs
- One stereo audio input for transmitting audio with multi-function card
- One optical sensor probe access port, support sending card to adjust brightness automatically
- Single card with 2.6 million pixels
- Supports standard and custom resolutions
- Support EDID management
- Supports storage of backup data for one-click repair

Product description

Serial number	Function Description
①	Device switch
②	Green light, RUN, running status indicator; red light, PWR, power supply status indicator

Port specifications

Input port		
Types	Quantity	specification
DVI	1	DVI-D input, support custom input resolution signal
Audio	1	3.5mm audio input interface

Output port		
Types	Quantity	specification
LAN	4	Single-port loading maximum 655360 pixels, maximum width 4000, maximum height 2000

Control port		
Types	Quantity	specification
USB
